Software engineer and MS Computer Science student at the University of the Pacific, with experience across full-stack development, databases, and AI-powered applications. Looking for a Software Engineering role where I can keep growing and contribute to impactful products.

EDUCATION

University of the Pacific, Stockton, CA

January 2025 - Now

MS Computer Science | GPA: 3.76 - Expected graduation: Dec 2026

University of Science, VNU – HCM, VietNam

2018 - 2022

BS Information System | Graduation: 2022

WORK EXPERIENCE

Software Engineer - UNICCS Co., Ltd

November 2022 - December 2024

- Developed and optimized product features across the full stack, improving system performance and SQL query efficiency for retail management systems used by clients in Japan.
- Designed and implemented backend services and application frameworks using Java Spring Boot, and built responsive frontend interfaces with Vue.js.
- Worked with PostgreSQL and DB2, performing SQL tuning, query optimization, and database schema design to support high-volume transaction processing.
- Deployed and maintained services on AWS cloud infrastructure, collaborating with the team to improve reliability and scalability. Automated deployment, build, and monitoring workflows with Shell scripting.

Tech: JavaScript, HTML, CSS, PostgreSQL, DB2, Shell, Vue.js, SQL, Java Spring Boot, AWS

Software Intern - FPT Telecom

December 2021 - June 2022

- Built and optimized RESTful APIs using Node.js and Express to power POP management dashboards, enabling real-time monitoring of telecom infrastructure.
- Developed interactive dashboards with React and Next.js, integrating Highcharts to visualize statistical data and infrastructure status across multiple POP stations.
- Designed and integrated MongoDB schemas to store and query telecom monitoring data efficiently.

Tech: React.js, Next.js, Express, Node.js, MongoDB, Highcharts

SKILLS

- Languages: Java, JavaScript, Python, C++, C#, PHP, HTML, CSS, SQL, TSQL
- Frameworks: React.js, Next.js, Vue.js, Node.js, Express, Spring Boot, Bootstrap
- Databases: PostgreSQL, MySQL, MongoDB, DB2, SQL Server, Oracle
- Tools: Git, GitHub, SVN, Jira, Trello, AWS, Shell, Highcharts, Jupyter Notebook
- Concepts: Data Structures & Algorithms, OOP, RESTful APIs, Database Design

PROJECTS

POP Management System - FPT Telecom

- Description: Build a dashboard manage telecom station system, statistics information, status of POP, monitor infrastructure problems and visualize the system's statistical data.
- Technologies / Languages: ReactJS, NextJS, Express, NodeJS, MongoDB, Highcharts.
- Responsibilities: Restful API, build interfaces based on design, data visualization.

CineVibes - Personal project

- Description: A full-stack movie discussion platform with spoiler-aware, category-based comment threads, trending rankings, and CineBot, an in-app AI chat assistant (Groq-hosted LLM) for movie recommendations and trivia, grounded in the app's own MongoDB catalog via a search tool.
- Technologies / Languages: React, Node.js, Express, MongoDB, Vite, JWT Auth, Groq.

ML-Assisted Natural Language to SQL Query System - Personal project

- Description: A CSV-agnostic natural language to SQL system: users upload any CSV and ask questions in plain English. Pairs a BERT intent classifier (fine-tuned on 1,250 examples across 14 domains) with a self-built, schema-aware rule-based SQL generator — no external LLM API calls.
- Technologies / Languages: Python, BERT (bert-base-uncased), Streamlit, SQLite, Pandas, Matplotlib, Seaborn.
