

Khoa Thai Dang Tran

Stockton, CA | (350) 217-8342 | dangkhoa2401bg@gmail.com | github.com/dangkhoa241 | dangkhoa241.github.io

Software engineer and MS Computer Science student at the University of the Pacific, with 2+ years of professional experience across full-stack development, databases, and AI-powered applications. Strong foundation in data structures & algorithms, database design, and automated testing/CI pipelines. Looking for a Software Engineering role where I can keep growing and contribute to impactful products.

EDUCATION

University of the Pacific, Stockton, CA

January 2025 - Present

MS Computer Science | GPA: 3.76 - Expected graduation: December 2026

University of Science, VNU - HCM, Vietnam

2018 - 2022

BS Information System | Graduation: 2022

WORK EXPERIENCE

Software Engineer - UNICCS Co., Ltd

November 2022 - December 2024

- Architected and implemented backend services and application frameworks in Java Spring Boot (object-oriented design) with responsive Vue.js frontends, delivering full-stack features for retail management systems used by clients in Japan.
- Improved system performance and SQL query efficiency through query tuning, indexing, and schema design on PostgreSQL and DB2, supporting high-volume transaction processing.
- Deployed and maintained services on AWS cloud infrastructure, collaborating with a cross-functional team to keep the platform stable, scalable, and production-ready; automated deployment, build, and monitoring workflows with Shell scripting.

Tech: JavaScript, HTML, CSS, PostgreSQL, DB2, Shell, Vue.js, SQL, Java Spring Boot, AWS

Software Intern - FPT Telecom

December 2021 - June 2022

- Built and optimized RESTful APIs using Node.js and Express to power POP management dashboards, enabling real-time monitoring of telecom infrastructure.
- Developed interactive dashboards with React and Next.js, integrating Highcharts to visualize statistical data and infrastructure status across multiple POP stations.
- Designed and integrated MongoDB schemas to store and query telecom monitoring data efficiently.

Tech: React.js, Next.js, Express, Node.js, MongoDB, Highcharts

SKILLS

- **Languages:** JavaScript, Python, Java, TypeScript, C++, C#, HTML, CSS, SQL, TSQL
- **Frameworks:** React.js, Next.js, Vue.js, Node.js, Express, Spring Boot, Bootstrap, Tailwind CSS
- **Databases:** PostgreSQL, MySQL, MongoDB, DB2, SQL Server, Oracle
- **Testing & CI/CD:** Vitest, Playwright, GitHub Actions
- **Tools:** Git, GitHub, SVN, Slack, AWS, Shell, Highcharts, Jupyter Notebook, Claude Code (AI-assisted development)
- **Concepts:** Object-Oriented Programming/Design, Data Structures & Algorithms, RESTful APIs, Database Design, Full-Stack Development, Agile/Scrum, LLM Integration & Prompt Engineering, Agentic/Tool-Use AI Systems

PROJECTS

CineVibes - Personal project

Description: Full-stack movie discussion platform with spoiler-aware, category-based comment threads, trending rankings, and CineBot, an in-app AI chat assistant (Groq-hosted LLM) for movie recommendations and trivia, grounded in the app's own MongoDB catalog via a search tool.

Testing & CI/CD: Designed the test strategy and automation framework: unit/integration tests (Vitest), end-to-end tests (Playwright/Cypress), and a GitHub Actions pipeline running the full test suite, lint, and build on every push/PR.

Technologies: React, Node.js, Express, MongoDB, Vite, JWT Auth, Groq, Vitest, Playwright, GitHub Actions.

ML-Assisted Natural Language to SQL Query System - Personal project

Description: CSV-agnostic natural language to SQL system: users upload any CSV and ask questions in plain English. Pairs a BERT intent classifier (fine-tuned on 1,250 examples across 14 domains) with a self-built, schema-aware rule-based SQL generator - no external LLM API calls.

Technologies: Python, BERT (bert-base-uncased), PyTorch, Streamlit, SQLite, Pandas, Matplotlib, Seaborn.

ExpenseTracker - Personal project

Description: Client-only expense tracker (logging/filtering, budgets, dashboard analytics, CSV/JSON/PDF export) built end-to-end in close collaboration with Claude Code: compared three parallel implementations of the export feature, caught and fixed a CSV-injection security bug the comparison surfaced, and verified every change with lint, a strict-mode TypeScript build, and the Vitest suite before merging.

Technologies: Next.js, React, TypeScript, Tailwind CSS, Recharts, jsPDF, Vitest.
